IsoId=P16471-2; Sequence-VSP_001720;
DOMAIN: The WSXWS motif appears to be necessary for proper folding and thereby efficient intracellular transport and c surface receptor binding.
DOMAIN: The box 1 motif is required for JAK interaction and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      activation.
SIMILARITY: Belongs to the type I cytokine family of Subfamily 1.
SIMILARITY: Contains 2 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 prolactin.
SUBCELLULAR LOCATION: Type I membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Name=1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Event=Alternative splicing; Named isoforms=2;

TISSUE SPECIFICITY: Found in all the tissues and cell lines examined. Expression not restricted to IL-6 responsive cells. DOMAIN: The WSXWS motif appears to be necessary for proper protein folding and thereby efficient intracellular transport and cell-surface receptor binding.

DOMAIN: The box 1 motif is required for JAK interaction and/or activation.

DISEASE: Isoform 2 is an autoantigen found in rheumatoid arthritis (RA) but it is not specific to patients with RA.

SIMILARITY: Belongs to the type I cytokine family of receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FUNCTION: Signal-transducing molecule. The receptor systems for 116, LIF, OSM, CNTF, IL11 and CTI can utilize gpl30 for initis signal transmission. Binds to IL6/IL6R (alpha chain) complex, resulting in the formation of high-affinity IL6 binding sites transduces the signal. Does not bind IL6. May have a role in embryonic development (By similarity).

SUBUNIT: Heterodimer of an alpha and a beta chain.

SUBCELLULAR LOCATION: Type I membrane protein (isoform 1).

Secreted (isoform 2).

                                                                                                                                                                                                                                                                                                                                                                               nterleukin-6 receptor
signal transducer) (N
SUBUNIT: Heterodimer of an alpha and a beta chain.
SUBUNIT: Heterodimer of an alpha and a beta chain.
SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: Found in tissues such as brain, heart, tispleen, kidney, lung and liver. Found in all the cell lines except BAF-B03. Expression not restricted to II6-responsive obsultopheromath. STAGE: In embryonic stem cells it is found from 6 of gestation. It reaches a peak on day 8 and gradually deciduring the rest of embryogenesis.

DOMAIN: The WSXWS motif appears to be necessary for recommendation.
                                                                                                                                FUNCTION: Signal-transducing molecule. The receptor systems for IL16, LIF, OSM, CNTF, IL11 and CT1 can utilize gp130 for initial signal transmission. Binds to IL6/IL6R (alpha chain) complex, resulting in the formation of high-affinity IL6 binding sites, transduces the signal. Does not bind IL6. May have a role in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MOUSE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         336

The complex is useful in the manufacture of a medicament for the treatment and/or prophylaxis of a subject, as it is involved in facilitating proliferation, differentiation and/or survival of a cell. The complex or its components have neurotrophic activity. The present sequence is murine haemopoietin receptor, NR6 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

             This is the nucleotide sequence of a cDNA clone encoding a novel type 1 cytokine receptor (see AAY05782) that has been termed human GBRI-IIR as it is believed to be an interleukin receptor, or at least a substantial part of such a receptor. To clone the cDNA, a 310 bp PCR product was amplified from human lung cDNA using primers designed from human ESTs that had been identified using the WSXWS motif of the mouse IL-13 receptor alpha 1 as query, and used as a probe to screen a human placental cDNA library. The GBRI-IIR receptor has also been identified i mice (see AAY05783), and the high degree of conservation of amino acids between the human and murine polypeptides indicates that this receptor i functionally important. GBRI-IIR nucleic acids are used for the recombinant production of GBRI-IIR polypeptides, nucleic acids, agonists, and primers. GBRI-IIR polypeptides, nucleic acids, agonists,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    inflammation; septic shock; cytostatic; anorectic; immu antiinflammatory; therapy;

SEQ ID NO

78pp + Sequence Listing;

The invention relates to genes and their expression profiles are used CC for: (a) screening modulators of precursor stem cell differentiation into CC osteoblasts, or bone tissue deposition; (b) diagnosing abnormal CC deposition of bone tissue, abnormal rate of osteoblast formation or CC cited in (b), or monitoring the progression of bone tissue deposition. CC cited in (b), or monitoring the progression of bone tissue deposition. CC osteoporosis or male osteoporosis, osteoporosis, glucocorticoid CC osteoporosis or male osteoporosis, osteoporosis, glucocorticoid CC induced abnormalities in bone formation or bone loss, conditions that CC induced abnormalities in bone formation or bone loss, conditions that CC induced abnormalities in bone formation or bone loss, conditions that CC skeletal disease linked to breast cancer, mastocytosis, Fanconi syndrome CC or fibrous dysplasia. The present sequence is that of an osteoblast CC differentiation associated CDNA marker of the invention. Note: The CC sequence data for this patent did not form part of the printed CC specification, but was obtained in electronic format directly from WIPO Car firm with a continuous contracts. ftp.wipo.int/pub/published_pct_sequences
